

Abstract Submitted  
for the APR12 Meeting of  
The American Physical Society

**Neutrino Exclusive Charged Current Quasi-Elastic Scattering in MINERvA** TAMMY WALTON, Hampton University — The MINERvA experiment will measure neutrino and antineutrino quasi-elastic scattering on helium, water, carbon, iron, and lead for neutrinos in the few GeV range. We will present an overview of MINERvA analysis plan for neutrino exclusive charged current quasi-elastic scattering on lead, iron, and carbon.
