**OPERA and MINOS Experimental Result Prove Big Bang Theory Invalid** DAVID E. PRESSLER, Primary Nuclear Research — The greatest error in the history of science is the misinterpretation of the Michelson-Morley Experiment. The speed of light was *measured* to travel at the same speed in all three directions ( $x, y, z$  axis) in ones own inertial reference system; however,  $c$  will always be measured as having an absolute *different* speed in all other inertial frames at different energy levels. Time slows down due to motion or a gravity field. Time is the rate of physical process. Speed = Distance/Time. If the time changes the distance must change. Therefore, **BOTH** mirrors must move towards the center of the interferometer and space must contract in all-three-directions; C-Space. Gravity is a C-Space condition, and is the cause of redshift in our universe-not motion. *The universe is not expanding.* OPERA results are directly indicated; at the surface of earth, the strength of the gravity field is at maximum-below the earth's surface, time and space is less distorted, C-Space; therefore,  $c$  is faster. Newtonian mechanics dictate that a spherical shell of matter at greater radii, with uniform density, produces no net force on an observer located centrally. An observer located on the sphere's surface, like our Earth's or a large sphere, like one located in a remote galaxy, will construct a picture centered on himself to be identical to the one centered inside the spherical shell of mass. Both observers will view the incoming radiation, emitted by the other observer, as redshifted, because they lay on each others radial line. The Universe is static and very old.
