Abstract for an Invited Paper
for the APR12 Meeting of
the American Physical Society

Beyond the Standard Model?

ANN NELSON, University of Washington

The LHC has already severely constrained the allowed parameter space for many versions of supersymmetry and other models which address the gauge hierarchy problem, as well as providing hints of a 125 GeV mass Higgs boson. I will discuss the implications of LHC searches for supersymmetric and other models of electroweak symmetry breaking. I will also review the status of some of the current anomalies in CP violation.
