Abstract for an Invited Paper  
for the APR13 Meeting of  
the American Physical Society

### **Recent Results and Future Opportunities in Neutrino Physics**

GERALYN ZELLER, Fermi National Accelerator Laboratory

Recent results from neutrino oscillation experiments are shaping the future direction of the field. The determination of a non-zero value for the smallest neutrino mixing angle ( $\theta_{13}$ ) and the prospect of seeing CP violation in neutrino oscillations place us on the threshold of a new era in neutrino physics. Recent developments and planned experiments will be reviewed.
