Abstract for an Invited Paper
for the APR14 Meeting of
the American Physical Society

QGP or not QGP?

VLADIMIR SKOKOV, Western Michigan University

In this talk I address the following questions: What is the role of the initial state effects versus the final state effects in nucleus-nucleus, proton-nucleus and proton-proton collisions? Is thermalization possible in these collisions? Can we use hydrodynamics for description of small systems? Can we observe saturation and low x evolution at the Large Hadron Collider? Is the ridge a saturation phenomenon or a signal of the hydrodynamic evolution?
