Abstract for an Invited Paper  
for the APR16 Meeting of  
the American Physical Society

### **Neutrinoless Double Beta Decay Results**

BERNHARD SCHWINGENHEUER, Max-Planck-Institut Kernphysik, Heidelberg

The search for neutrinoless double beta decay might be the only opportunity to observe lepton number violation and to determine the nature of neutrinos. It is therefore considered to be of highest relevance. Many experimental searches using a variety of different isotopes and measurement techniques are ongoing or proposed. The different experimental approaches and their status are reviewed as well as proposed future extensions.
