**Electric polarizability of neutral hadrons from lattice QCD<sup>1</sup>**

FRANK LEE, ANDREI ALEXANDRU, MICHAEL LUJAN, George Washington Univ, WALTER FREEMAN, Syracuse University — We report on the electric polarizability for the neutron, neutral pion, and neutral kaon from lattice QCD. The results are based on dynamical QCD ensembles at two different pion masses: 306 and 227 MeV. An infinite volume extrapolation is performed for each hadron at both pion masses. The resulting polarizabilities are compared with other lattice calculations, ChPT, and experiment.
