The American Physical Society

New Ice Age And Dark Impact After 15 years DAYONG CAO, Avoid Earth Extinction Association — Diminishing solar activity may bring new Ice Age by 2030 <https://astronomynow.com/2015/07/17/diminishing-solar-activity-may-bring-new-ice-age-by-2030/> The paper supports my supposition. <http://meetings.aps.org/link/BAPS.2012.APR.K1.78> There is a balance system between the sun and the dark sun. The system of dark sun periodic impact the sun system it be called dark impactand cause ice age and extinction. New dark impact and ice age will come in 2030. According to a balance between both structure of solar system and structure of dark solar system, and balance between nuclear fusion of sun and dark nuclear fusion of dark sun, the relationship between dark impact and ice age will be considered.
