Introduction to the New Cosmology ARDESHIR IRANI, The Dark Side Research Institute — Our third spatial dimension (3D) is currently in the process of building the fourth spatial dimension within the void. Dark Energy is being used to create higher dimensions of space from the first to the n th, and it is also responsible for the formation of the fourth dimension from the point singularities of the vacuum space of our third dimension. In order to create up to the n th dimension, $n!$ zero dimensional singularities will arise simultaneously in the void. Once the creation of a n dimensional ellipsoidal universe has been completed, the outward Dark Energy force will end, and then the inward force of gravity will take over to crush the n dimensional universe into the center of the $(n+1)$ st dimensional singularity of the void. Dark Matter is the matter that exists in the fourth dimension as four dimensional matter spewed there through the Black Hole singularities of our third dimension. A rotating ellipsoidal multiverse is a natural byproduct of this new theory of cosmology which also predicts the existence of an oscillatory multiverse.
