Unassociated

candidate TeV sources from HAWC¹ NICOLE FIRESTONE², KATHERINE FOWLER³, SARAH GREBERMAN⁴, MIGUEL MOSTAFA, Pennsylvania State University, HIGH-ALTITUDE WATER CHERENKOV OBSERVATORY (HAWC) COLLABORATION — There were 19 TeV candidates with no association with any known high-energy sources in the 2HWC catalog (508 days) of TeV sources. We will report the results from the follow-up of these unassociated HAWC sources using the most recent HAWC dataset, which has 1523 transits.
