for the APR21 Meeting of
The American Physical Society

Rate Change Science Origins: Gravity and Dark Matter KENNETH STRICKLAND, Rate Change Science — Rate Change Science (RCS) is a new frontier. It is just as much a reorganization of science as it is the modernization of “rate of change”. This discipline is a representation of objects, object derivatives and attributes that have populated the universe since the big bang. Like stereoscopic vision this science sees the universe for all its geometrical grandeur. The first upgrade was to invent a rate change graph. This missing piece of the puzzle gives an observer views of the universe through the eyes of rate change objects, visible and invisible. At the 2021 conference, RCS will advance a new theory of two gravity waves with major updates on the nature of dark matter. This research will stimulate new inclusive features for these invisible objects. .
