Abstract for an Invited Paper
for the DFD10 Meeting of
the American Physical Society

Splashes

CHRISTOPHE CLANET, LadHyX, Ecole Polytechnique, France

I was looking for a term which could encompass the research done over the last 15 years on inertial motions at liquid interfaces. A suggestive word which could connect, water bells, Taylor bubbles, skipping stones, air cavities. I tried my best but I didn't find better than Splashes.
