

Abstract Submitted
for the DNP13 Meeting of
The American Physical Society

Excited nucleon spectrum and structure ELENA SANTOPINTO,
INFN — The longitudinal and transverse helicity amplitudes for all the known Nstar resonances have been calculated in a systematic way within a quark model. They will be presented and compared with a large number of experimental data recently obtained. A discussion on their structure will be also given. Results regarding the Unquenching of the quark model will be also presented and discussed.
