Abstract for an Invited Paper
for the DNP13 Meeting of
the American Physical Society

Nuclear Physics Tests of CP

MICHAEL RAMSEY-MUSOLF, University of Massachusetts Amherst

The search for yet unseen violation of CP symmetry both within and beyond the Standard Model is at the forefront of nuclear physics tests of fundamental symmetries and studies of neutrino properties. In this talk, I review the theoretical expectations and implications of searches for permanent electric dipole moments of neutral atoms, nucleons and nuclei as well as tests of CP symmetry in neutrino interactions.
