Generalized TMDs in Hadronic Collisions¹ ANDREAS METZ,
SHOHINI BHATTACHARYA, Temple University, JIAN ZHOU, Shandong Univer-
sity — Generalized transverse momentum dependent parton distributions (GTMDs)
are the most general parton correlation functions of hadrons. For a long time it was
not clear if/how GTMDs can be measured. We argue that the exclusive double Drell-
Yan process and η_c production in hadronic collisions do give access to GTMDs. We
also discuss how specific GTMDs can be measured by means of polarization observ-
ables.
