

Abstract Submitted  
for the MAR06 Meeting of  
The American Physical Society

**Reflection on econophysics by a statistician** SAMUEL KOTZ, Department of Engineering, George Washington University, DC — Some comments on econophysics from a statistician steeped in income distributions and power law. The pioneering work T. Lux and J. Angle will be discussed, and its connection with the classical approach to income distributions and inequalities will be analyzed. Special attention will be devoted to tracing the changes in the income inequalities in Russian Federation during the transition period 1992–2004.
