Abstract for an Invited Paper
for the MAR06 Meeting of
the American Physical Society

Exploiting the unique electronic and mechanical properties of carbon and boron nitride nanotubes

ALEX ZETTL, University of California at Berkeley

Carbon and boron nitride nanotubes have unusual geometrical features that affect their electronic, thermal, and mechanical properties. I will discuss relevant experimental studies of the underlying physics, as well as possible applications including sensors, nanoscale electric motors, high frequency tunable resonators, and phonon waveguides.
