Abstract for an Invited Paper
for the MAR06 Meeting of
the American Physical Society

Studying the BEC-BCS crossover with an ultracold gas of ^6Li atoms

JOHANNES HECKER DENSCHLAG, Institut fuer Experimentalphysik, Universitaet Innsbruck, Austria

Collective oscillations are a good tool to investigate the properties of an ultracold Fermi gas in the BEC-BCS crossover. We will present new and improved measurements on these collective excitations. Our results help to determine the equation of state of the strongly interacting Fermi gases.
