NOLAS, Department of Physics, University of South Florida, Tampa, FL 33620 USA, DEPARTMENT OF PHYSICS, UNIVERSITY OF SOUTH FLORIDA, TAMPA, FL 33620 USA TEAM, SHANGHAI INSTITUTE OF CERAMICS, CHINESE ACADEMY OF SCIENCES, SHANGHAI 200050, CHINA COLLABORATION — Recent results on thermoelectric properties of superlattice and nano-scale materials have energized the search for high-performance thermoelectric materials. Thermoelectric technology requires materials in large quantities therefore new approaches are needed to incorporate nano-scale enhancement into bulk materials. We present a technique to synthesize dense bulk nanocomposites reproducibly, and investigate their structural and transport properties. Transport properties demonstrate a strong dependence on porosity, highlighting the necessity of dense nanocomposites for thermoelectric applications.
