

Abstract Submitted  
for the MAR08 Meeting of  
The American Physical Society

**Interplay of superconductivity and rattling phenomena in  $\beta$ -pyrochlore  $\text{KOs}_2\text{O}_6$  studied by photoemission spectroscopy** TAKAHIRO SHIMOJIMA, YUKI SHIBATA, KYOKO ISHIZAKA, TAKAYUKI KISS, ASHISHI CHAINANI, TAKAYOSHI YOKOYA, TADASHI TOGASHI, XIAOYANG WANG, CHUANGTIAN CHEN, SHUNTARO WATANABE, JYUNICHI YAMAURA, SHIGEKI YONEZAWA, YUJI MURAOKA, ZENJI HIROI, TOMOHIKO SAITOH, SHIK SHIN, UNIVERSITY OF TOKYO TEAM, THE INSTITUTE OF PHYSICAL AND CHEMICAL RESEARCH TEAM, OKAYAMA UNIVERSITY TEAM, TOKYO UNIVERSITY OF SCIENCE TEAM, CHINESE ACADEMY OF SCIENCE TEAM — The electronic structure near Fermi level of  $\text{KOs}_2\text{O}_6$  is studied by a laser-excited photoemission spectroscopy. The superconducting(SC) gap clearly opens across the SC transition at 9.6 K, with the strong electron-phonon coupling value of  $2\Delta(0)/k_B T_c \geq 4.56$ . Fitting analysis identifies clear anomalies at 7.5 K in the temperature dependences of the SC gap size and the quasiparticle relaxation lifetime. These anomalies and the fine spectral structures arising from phonons, suggest that the existence of the rattling behavior of K ions significantly affects the superconductivity in  $\text{KOs}_2\text{O}_6$ .
