h/e -Flux Periodicity in Superconducting Loops¹ ARNO KAMPF,
FLORIAN LODER, THILO KOPP, JOCHEN MANNHART, CHRISTOF SCHNEI-
DER, University of Augsburg, YURI BARASH, Russian Academy of Sciences,
Chernogolovka — We apply the BCS theory to superconducting rings with un-
conventional order parameter symmetries. An external magnetic flux changes the
character of the states in the condensate; as a consequence the energy of the super-
conducting ground state varies with a flux period of h/e . This h/e periodicity is
caused by the flux-induced reconstruction of the supercurrent carrying condensate.
