Fermi surface and electronic structure in iron-based superconductors from Angle-Resolved Photoemission Spectroscopy HAIYUN LIU, XINGJIANG ZHOU, INSTITUTE OF PHYSICS, CHINESE ACADEMY OF SCIENCES TEAM — We will report our high resolution Angle-Resolved Photoemission measurements on iron-based superconductors. Multiple Fermi pockets are well resolved around the $\Gamma(0, 0)$ and $M(\pi, \pi)$ point. In addition, detailed temperature dependent electronic structures will be shown both above and below magnetic/structural transition (T_{MS}).
