

Abstract Submitted  
for the MAR10 Meeting of  
The American Physical Society

**Investigation of charge order in  $\text{Ca}_{2-x}\text{Na}_x\text{CuO}_2\text{Cl}_2$  using ARPES**

JIANQIAO MENG, M. BRUNNER, GEY-HONG GWEON, Department of Physics, UC Santa Cruz, K.-H. KIM, H.-G. LEE, Department of Physics, Pohang University of Science and Technology, S.-I. LEE, Department of Physics, Seogang University, DEPARTMENT OF PHYSICS, UC SANTA CRUZ TEAM, DEPARTMENT OF PHYSICS, POHANG UNIVERSITY OF SCIENCE AND TECHNOLOGY COLLABORATION, DEPARTMENT OF PHYSICS, SEOGANG UNIVERSITY COLLABORATION — The electronic structure of doped cuprate superconductors  $\text{Ca}_{2-x}\text{Na}_x\text{CuO}_2\text{Cl}_2$  of various doping values (including underdoping, optimal doping and overdoping) is investigated using angle-resolved photoemission spectroscopy (ARPES). We discuss our new data in terms of charge order, by comparing them with the ARPES data and the scanning tunneling spectroscopy data in the literature.
