Abstract for an Invited Paper
for the MAR11 Meeting of
the American Physical Society

Spin liquids, spin-orbit coupling, and band topology

LEON BALENTS, Kavli Institute of Theoretical Physics

Much of the search for quantum spin liquids has focused on spin-rotationally invariant model Hamiltonians, appropriate for weakly spin-orbit coupled materials. With strong spin-orbit interactions, distinct theoretical approaches are required, and novel spin liquid states may occur. Some such candidate states will be discussed, along with the mechanisms leading to them.
