Multi-scale entanglement renormalization for critical systems

BELA BAUER, Theoretische Physik, ETH Zurich, LIZA HUIJSE, Department of Physics, Harvard University, KARELJAN SCHOUTENS, Institute for Theoretical Physics, University of Amsterdam, GUIFRE VIDAL, The University of Queensland, Department of Physics, Brisbane, MATTHIAS TROYER, Theoretische Physik, ETH Zurich — Determining information about the underlying conformal field theory of a critical system in one dimension, such as the central charge and scaling dimensions, is a notoriously difficult problem for numerical methods. Using a suitable tensor network state, the multi-scale entanglement renormalization ansatz [1], this information is directly accessible [2]. We apply this method to several critical systems in one dimension, including a supersymmetric model for lattice fermions and Yang-Lee chains.
