

Abstract Submitted
for the MAR11 Meeting of
The American Physical Society

The role of interfacial water in “nano” ALENKA LUZAR, Virginia Commonwealth University, JIHANG WANG, CHRIS DAUB, DUSAN BRATKO, CHEMISTRY DEPARTMENT, VCU TEAM — To understand the role of interfacial water on nanostructured surfaces is important for materials science and biology. The talk will describe some of our recent progress in predicting and understanding the effects of nanopatterning on topologically or chemically heterogeneous surfaces on wetting via *in silico* experiments.
