Terahertz conductivity of Bi_2Se_3 topological insulator thin films¹

ROLANDO VALDÉS AGUILAR, L.S. BILBRO, Department of Physics & Astronomy, Johns Hopkins University, Baltimore, MD 21218, N. BANSAL, Y-S. KIM, S. OH, Department of Physics & Astronomy, Rutgers University, Piscataway, NJ 08854, C. CHANG, Y. ZHANG, K. HE, X. MA, Institute of Physics, The Chinese Academy of Sciences, Beijing, 100190, P.R. China, X. ZHU, Q-K. XUE, Department of Physics, Tsinghua University, Beijing, 100084, P. R. China, N.P. ARMITAGE, Department of Physics & Astronomy, Johns Hopkins University, Baltimore, MD 21218 — We report a study of high quality MBE grown Bi_2Se_3 topological insulator thin films. We have measured the ac conductivity in the terahertz region using time domain terahertz spectroscopy. By measuring films with different thickness we can set limits on the value of the bulk and surface conductivities. We will also report on measurements of the Faraday rotation using polarized light at these frequencies.
