Abstract for an Invited Paper  
for the MAR12 Meeting of  
the American Physical Society

### **Exploration of Superconductivity in Layered Structures<sup>1</sup>**

ATHENA SEFAT, Oak Ridge National Laboratory

Superconductivity at high temperatures is of great interest in terms of both basic science and applications. Although there are many findings on the chemistry and physics of superconductors, there are a lot of questions that remain unanswered. We will review experimental routes to possibly finding and identifying new superconducting materials.
