

Abstract Submitted  
for the MAR15 Meeting of  
The American Physical Society

**Optical V-Band Observations of Active Galactic Nuclei** TAYLOR HUTCHISON, RAINA MUSSO, FRANCIS MACINNIS , MARK BOTTORFF, Southwestern University — Students at Southwestern University participated in an international observing campaign to study twelve active galactic nuclei (AGN). As part of this project, the students measured optical V-band light variations of four targets within the range of the Southwestern University Fountainwood Observatory research telescope. Target images and a sample light curve of one target (NGC 5548) are presented.
