

Abstract Submitted  
for the MAR15 Meeting of  
The American Physical Society

**On the Phase Diagram of  $\text{FeSe}_{1-x}\text{As}_x$** <sup>1</sup> KHALIL ZIQ, T. OWOLABI,  
King Fahd University of Petroleum and Minerals, Physics Department — Structural,  
magnetic and transport measurements have been performed on  $\text{FeSe}_{1-x}\text{As}_x$  samples  
in the normal and superconducting state in an effort to obtain the phase diagram. It  
is found that As-substitution drastically suppress the superconducting state while it  
has little effect of structural transformation as the temperature decreases. Moreover,  
low As-concentration ( $\sim 1\%\text{As}$ ) has been found very effective in stabilizing the  $\beta$ -  
FeSe phase.
