

Abstract Submitted  
for the APR16 Meeting of  
The American Physical Society

**The iTOP particle identification detector at Belle II** SHAWN DUBEY, University of Hawaii, BELLE II COLLABORATION — We describe the iTOP (imaging Time Of Propagation) detector in the Belle detector at the SuperKEKB accelerator, located at KEK in Tsukuba, Japan. The principle of operation, readout and the expected kaon/pion separation capabilities will be described. Status of the detector construction and integration will be discussed.
