Abstract for an Invited Paper
for the APR17 Meeting of
the American Physical Society

Contemporary Physics Education Project (CPEP) – an organization dedicated to presenting the latest physics discoveries in an understandable and colorful style.

HOWARD MATIS, Lawrence Berkeley Natl Lab

Since 1986, The Contemporary Physics Education Project has been creating colorful posters and materials that describe s physics. Its mission is to provide information so that the public easily can access current physics knowledge. Our publications summarize the latest discoveries and describe areas of current research. We have created materials in Particle Physics, Fusion Science, Nuclear Physics, and Cosmology. All of these materials are carefully vetted for scientific accuracy. CPEP presents them at workshops and distributes the materials widely so that teachers and students can use them in their classrooms. In this talk, I will describe what CPEP has created, including its most recent project that features the recent discovery of gravitational waves. To further our mission, our organization is actively seeking physicists and teachers to extend our outreach.
