

Abstract Submitted
for the MAR08 Meeting of
The American Physical Society

Post modern physic (a revolution in modern physics) SHAHRAM MALEKZADEH, Assistant Professor — When you make a deep Study in Classic and modern physics you will find great and numerous weak points. On the other hand when you want to dismiss a wrong theory you should accept the other maybe incorrect theory so I think that we should write the physics from very beginning. Here I mentioned new theories on each field that can be a start for other scientists. Theories like “cyclone theory” which is about light travel or “matrix theory” which denotes that the materials are not made only atoms but an external capsule named matrix.

Shahram Malekzadeh
Assistant Professor
