Title: Time-Dependent Mean Field Theory for Quench Dynamics in correlated electron systems

MARCO SCHIRO', Princeton Center for Theoretical Science, Princeton University, MICHELE FABRIZIO, SISSA, International School for Advanced Studies — A simple and very flexible variational approach to the out-of-equilibrium quantum dynamics in strongly correlated electron systems is introduced through a time-dependent Gutzwiller wavefunction. As an application, we study the simple case of a sudden change of the interaction in the fermionic Hubbard model and find at the mean field level an extremely rich behaviour. In particular, a dynamical transition between small and large quantum quench regimes is found to occur at half-filling, in accordance with the analysis of Eckstein et al., Phys. Rev. Lett. 103, 056403 (2009), obtained by dynamical mean field theory, that turns into a crossover at any finite doping.
