Abstract for an Invited Paper
for the SES13 Meeting of
the American Physical Society

Maximizing the impact of graduate schools and postdoctoral fellowships on your careers

MASAHIRO ISHIGAMI, Department of Physics and Nanoscience Technology Center, University of Central Florida

You can pursue your research careers in academia, industry and government laboratories/agencies. All of these options require graduate degrees and/or postdoctoral experiences. I will show how to select the right research topics, pick the right research groups and find your first research jobs. In addition, I will also demystify academic careers and show how to succeed as professors (get funded and tenured).
